

# Animation Voice Over: Changes Matter

*WALT: write a detailed voiceover for my animation*

This week we are going to create a script for our animation that we are creating with Mrs Burton. You will need to think about what your animation is showing and how you can explain to your audience what is happening and why.

**Plan-**Write some **keywords** to help when you write your sentences

**Introduce your animation (this doesn't need to be long):**

What have we been learning about this term? (Inquiry topic)

**Solid to liquid:** Describe what this process is and how you are showing this in your animation.

**Liquid to gas:** Describe what this process is and how you are showing this in your animation.

**Liquid to solid:** Describe what this process is and how you are showing this in your animation.

**Summary/ Conclusion -** Thank your audience and ask for a comment to be left on your blog.

**WRITE**

**This term we are learning about solids, liquids and gases. Our theme is Changes Matter**

When a Solid turns into a liquid this is what happens: it melts from heat. For example when ice melts from the heat from the sun it turns into a liquid.

When a liquid turns into a gas this is what happens. If you boil water steam will come out and the liquid turns into a gas.

When a liquid turns into a solid this is what happens. First you put something made out of liquid into something that's cold like a freezer. The liquid then turns into a solid called ice.
